Zug, Switzerland

WORK EXPERIENCE

IT Internship

TWINT AG

June, 2025 - August 2026 Zürich, Switzerland

- Completed a rotation across 3 different IT disciplines including QAT Automation, Full Stack Software Development and Azure Cloud Engineering
- Built a real-time test results dashboard in React served via Nginx, adopted by all internal developers and utilized by client banks across Switzerland as a tool for measuring service reliability
- Developed 100+ E2E API Integration tests (REST & SOAP) in Java using Playwright, AssertJ and Spring covering complex multi-step workflows across internal APIs
- Architected and delivered a full re-design of the finance processor mock service - one of the most complex APIs in the ecosystem - migrating Wildfly to Spring Boot using hexagonal architecture, OpenAPI specifications, and REST design principles
- Built an Angular UI for the mock service, containerized the project with Docker/JibDocker and deployed via GoCD and Rancher with Kibana logging
- Gained hands-on Azure Cloud experience assisting in migrating services from the Swisscom Cloud to Azure using Terragrunt
- Engineered a Tier 1 Capital collateral forecasting prototype utilizing an XGBoost predictive model

SKILLS - Spring Boot, Angular, Docker, Kubernetes, Jenkins GoCD, Terraform, Terragrunt, OpenAPI

Junior Software Intern

Service365

July, 2024 - December 2024 Zug, Switzerland

- Developed in-house dashboard using NextJS and PostgreSQL to display critical day-to-day information for clients
- Tested software for bugs and operating speed, fixing bugs and documenting processes to increase efficiency
- Built RESTful APIs that served data to the TypeScript front-end based on dynamically chosen user inputs that handled thousands of concurrent users
- Produced detailed design documentation, unit testing, and documented code for in-house web app
- Gained insight into deploying a web app through Microsoft Azure

SKILLS - React, PostgreSQL, Prisma

ABOUT ME

Having grown up in Canada, I moved with my family to Switzerland in 2015. I completed my middle and high school education in 2021 from the International School of Zug and Luzern. I am currently pursuing a Master's in Software Engineering at the University of Glasgow. In my free time I play various instruments and sing in a band, as well as play tennis and padel.

EDUCATION

MSci Software Engineering

University of Glasgow

Sept 2022 - June 2027

GPA: 3.6/4

Relevant courses

- Data Structures & Algorithms
- Cybersecurity Fundamentals
- Database Fundamentals
- Deep Learning
- Web App Development

Extra Curriculars

- VP of Glasgow Ice Hockey Team
- Glasgow University Computing Society

LANGUAGES

English - Native

German - B1

French - A2

ACCOMPLISHMENTS

University of Glasgow Hackathon - 2nd Place (Honorable Mention)

PROJECTS

Henshawf1.ch

Full Stack F1 Prediction Platform

Next.js · Supabase · Prisma · Vercel · Azure

- Designed and shipped a production F1 prediction platform from scratch, automating the full data pipeline from a live F1 API across 24 races per season — handling ingestion, scoring, and leaderboard updates with zero manual intervention
- Built a production-grade auth system including encrypted account creation, JWT-based password reset via email token, and an SMS notification service to prompt users with unsubmitted predictions ahead of race deadlines
- Architected cloud infrastructure across Vercel and Microsoft Azure Blob Storage with a Prisma ORM layer over Supabase, scaling to 25–30 active users per season

SUERC AMS Database

BSc Project Scientific Data Management

Python · Pandas · Docker · GitLab CI/CD

- Led a six-month agile project within a 5-person team to design and deliver a database system for a mass spectrometry research lab, managing formal client meetings and a signed software delivery agreement
- Engineered relational schema with 250+ columns to accurately model highly structured scientific measurement data, requiring deep domain knowledge acquired through extensive stakeholder collaboration
- Solved a critical scalability challenge by implementing data compression to reduce storage requirements by 90%
